Building Capabilities for Productive Development Jorge Cornick 2018-06-29 Productive development policies (PDPs) are notoriously hard. They involve a daunting level of technical detail, require public-private collaboration, are in constant danger of capture, and demand time consistency hard to achieve in a politically volatile region. Nevertheless, the potential of PDPs to revitalize the region's economic performance and spur productivity growth cannot be ignored. This book takes an in-depth look at 17 cases involving productive development agencies from Argentina, Brazil, Costa Rica and Uruguay, identifying key features of institutional design and agency-level practices that make success more likely in this difficult policy arena. Careful study of these experiences might help successful productive development policies gain currency across the region. The cases in this book should not be seen as the exceptions that prove the rule of lackluster PDP performance, but rather as examples that demonstrate the rule can be broken.

Technologies and Approaches to Reducing the Fuel Consumption of Medium- and Heavy-Duty Vehicles National Research Council 2010-08-30 Technologies and Approaches to Reducing the Fuel Consumption of Medium- and Heavy-Duty Vehicles evaluates various technologies and methods that could improve the fuel economy of medium- and heavy-duty vehicles, such as tractor-trailers, transit buses, and work trucks. The book also recommends approaches that federal agencies could use to regulate these vehicles' fuel consumption. Currently there are no fuel consumption standards for such vehicles, which account for about 26 percent of the transportation fuel used in the U.S. The miles-per-gallon measure used to regulate the fuel economy of passenger cars. is not appropriate for medium- and heavy-duty vehicles, which are designed above all to carry loads efficiently. Instead, any regulation of medium- and heavy-duty vehicles should use a metric that reflects the efficiency with which a vehicle moves goods or passengers, such as gallons per ton-mile, a unit that reflects the amount of fuel a vehicle would use to carry a ton of goods one mile. This is

called load-specific fuel consumption (LSFC). The book estimates the improvements that various technologies could achieve over the next decade in seven vehicle types. For example, using advanced diesel engines in tractor-trailers could lower their fuel consumption by up to 20 percent by 2020, and improved aerodynamics could yield an 11 percent reduction. Hybrid powertrains could lower the fuel consumption of vehicles that stop frequently, such as garbage trucks and transit buses, by as much 35 percent in the same time frame.
