Breve diccionario etimologico de la lengua espanola Guido Gómez de Silva 1985

The main purpose of this etymological dictionary is to trace each Spanish word as far back as possible in order to acquaint the reader with the history of the evolution of the Spanish language; another of its aims is to help students learn vocabulary, e.g., the English word 'sky' does not help English speaking persons learn the Spanish work 'cielo' but the English word 'celestial' does. Etymology is the history of words, and, as words stand for things, it is also the history of things,

and therefore of civilisation. The words analyzed in this dictionary cover every area of human endeavor, including science and technology; in addition to words, the book contains certain phrases, and many affixes. Although some Spanish words are not of Indo-European origin, most of them are. In view of the proportion of words with similar etymologies in certain languages, this Spanish etymological dictionary can also be used to find the origin of thousands of English, French, Italian and Portuguese words as well as that of many words from other languages. Many Indo-European roots are represented in Spanish words and therefore this dictionary forms a complete picture of Indo-European etymology. This etymological dictionary is of great value to all those working with, or interested in, the Spanish language. As a reference work it should be on the shelves of school, university and general public libraries as well as other appropriate reference libraries. It is of particular value to students and teachers of Spanish and to translators and conference interpreters.

The Trotula Monica H. Green 2001-03-19 The Trotula was the most influential compendium on women's medicine in medieval Europe. Scholarly debate has long focused on the traditional attribution of the work to the mysterious Trotula, said to have been the first female professor of medicine in eleventh- or twelfth-century Salerno, just south of Naples, then the leading center of medical learning in Europe. Yet as Monica H. Green reveals in her introduction to this first edition of the Latin text since the sixteenth century, and the first English translation of the book ever based upon a medieval form of the text, the Trotula is not a single treatise but an ensemble of three independent works, each by a different author. To varying degrees, these three works reflect the synthesis of indigenous practices of southern Italians with the new theories, practices, and medicinal substances coming out of the Arabic world. Arguing that these texts can be understood only within the intellectual and social context that produced them, Green analyzes them against the background of historical gynecological literature as well as current knowledge about women's lives in twelfth-century southern Italy. She examines the history and composition of the three works and introduces the reader to the medical culture of medieval Salerno from which they emerged. Among her findings is that the second of the three texts, "On the Treatments for Women," does derive from the work of a Salernitan woman healer named Trota. However, the other two texts—"On the Conditions of Women" and "On Women's Cosmetics"—are probably of male authorship, a fact indicating the complex gender relations surrounding the production and use of knowledge about the female body. Through an exhaustive study of the extant manuscripts of the Trotula, Green presents a critical edition of the so-called standardized Trotula ensemble, a composite form of the texts that was produced in the mid-thirteenth century and circulated widely in learned circles. The facing-page complete English translation makes the work accessible to a broad audience of readers interested in medieval history, women's studies, and premodern systems of medical thought and practice.

Emerging Equine Science J. Alliston 2004-01-01 The importance of the equine industry to the rural economy is now beginning to be recognised. Because the

horse is not treated as an agricultural animal, little money has been put into research. Nevertheless, many organizations have been increasing research activities, and this book pulls together the results of recent thinking.

Equine Applied and Clinical Nutrition E-Book Raymond J. Geor 2013-01-31
Equine Applied and Clinical Nutrition is a comprehensive text resource on the nutrition and feeding management of horses. Over 20 experts from around the world share their wisdom on a topic of central relevance to all equine practitioners and the equine community generally. Both basic and applied (including healthy and diseased animals) nutrition and feeding management of horses and other equids (i.e. ponies, donkeys, wild equids) are covered. The book will appeal to a wide audience: undergraduate and post-graduate students in equine science and veterinary medicine, veterinarians, equine nutritionists, horse trainers and owners. The clinical component will strengthen the appeal for equine veterinarians. Equine Applied and Clinical Nutrition will be a "must have" for anyone involved in the care of horses, ponies and other equids. The book is divided into 3 parts: Basic or core nutrition in this context refers to digestive physiology of the horse and the principles of nutrition. Applied nutrition deals with the particular types of foods, and how to maintain an optimum diet through various life stages of the horse. You might characterize this aspect as prevention of disease through diet. Clinical nutrition covers various diseases induced by poor diet, and their dietary treatment and management. It also looks at specific feeding regimes useful in cases disease not specifically induced by diet. Authoritative, international contributions Strong coverage of clinical aspects either omitted from or only sparsely dealt with elsewhere Full colour throughout The only clinical equine nutrition book

Nutrition of the exercising horse M. Saastamoinen 2008-07-05 The exercising horse competes at various levels in different disciplines and is also increasingly used for leisure riding and driving as well as hobby farming and agritourism. This varied use of the horse of today creates challenges for those who are responsible for the feeding of horses, as well as to feed producers and manufacturers. This book provides an outstanding synthesis of knowledge in physiology and metabolism, nutritional requirements and feeding strategies. Use of performance aids and the question of feed contaminants and doping are explained and discussed according to EU legislation on the marketing and use of animal feeds and doping rules in horse sports. The improved knowledge and understanding of the background of the horse's performance and nutritional physiology helps to meet the nutritional requirements of working (or exercising) horses such that their genetic potential can be used properly. This book discusses the following seven subjects: -nutrients and tissue metabolism; -adaptations; -energy requirements; -protein requirements; -mineral, electrolytes and vitamins requirements and function; -feeding strategies; -performance aids and feed contaminants and doping. This book is the fourth step of further discussion on the

evaluation and prediction of the requirements of different types of horses covered in the scope of the working group Nutrition of the Horse commission at European Association of Animal Production (EAAP). All those concerned by racing, riding and feeding in equine industry will enjoy this valuable resource. It is a reference book for scientists, veterinarians, advisers and practitioners in the equine industry, as well as for teachers and students in equine science.

Norman Kings of Sicily and the Rise of the Anti-Islamic Critique Joshua C. Birk 2017-01-11 This book is an investigative study of Christian and Islamic relations in the kingdom of Sicily during the eleventh and twelfth centuries. It has three objectives. First, it establishes how and why the Norman rulers of Sicily, all of whom were Christians, incorporated Muslim soldiers, farmers, scholars, and bureaucrats into the formation of their own royal identities and came to depend on their Muslim subjects to project and enforce their political power. Second, it examines how the Islamic influence within the Sicilian court drew little scrutiny, and even less criticism, from intellectuals in the wider world of Latin Christendom during the time period. Finally, it contextualizes and explains the eventual emergence of Christian popular violence against Muslims in Sicily in the latter half of the twelfth century and the evolution of a wider discourse of anti-Islamic sentiment throughout Western Europe.

Applied equine nutrition and training Arno Lindner 2015-08-06 This book describes recent developments on equine nutrition and rehabilitation. Experts provide reviews on feeding horses with roughage only and with medicinal plants, as well as insight in the potential importance of monitoring the urine of horses for mycotoxins. Information on the effect of supplementing the diet of horses with

dimethylglycine and aleurone complement the nutritive information. Moreover, overviews are given on managing the whole horse instead of the lesioned tissues only and inform on a new tool to monitor the effect of measures taken. In addition, there is very specific information on the effect of training horses included. The book will be of interest to those working in the field of equine sports nutrition, science and medicine.

Opera in Seventeenth-Century Venice Ellen Rosand 2007-10-09 "In this elegantly constructed study of the early decades of public opera, the conflicts and cooperation of poets, composers, managers, designers, and singers—producing the art form that was soon to sweep the world and that has been dominant ever since—are revealed in their first freshness."—Andrew Porter "This will be a standard work on the subject of the rise of Venetian opera for decades. Rosand has provided a decisive contribution to the reshaping of the entire subject. . . . She offers a profoundly new view of baroque opera based on a solid documentary and historical-critical foundation. The treatment of the artistic self-consciousness and professional activities of the librettists, impresarios, singers, and composers is exemplary, as is the examination of their reciprocal relations. This work will have a positive effect not only on studies of 17th-century, but on the history of opera in general."—Lorenzo Bianconi

History, Literature, Critical Theory Dominick LaCapra 2013-05-15 In History, Literature, Critical Theory, Dominick LaCapra continues his exploration of the complex relations between history and literature, here considering history as both process and representation. A trio of chapters at the center of the volume concern

the ways in which history and literature (particularly the novel) impact and question each other. In one of the chapters LaCapra revisits Gustave Flaubert, pairing him with Joseph Conrad. Other chapters pair J. M. Coetzee and W. G. Sebald, Jonathan Littell's novel *The Kindly Ones* and Saul Friedländer's two-volume, prizewinning history *Nazi Germany and the Jews*. A recurrent motif of the book is the role of the sacred, its problematic status in sacrifice, its virulent manifestation in social and political violence (notably the Nazi genocide), its role or transformations in literature and art, and its multivalent expressions in "postsecular" hopes, anxieties, and quests. LaCapra concludes the volume with an essay on the place of violence in the thought of Slavoj Žižek. In LaCapra's view Žižek's provocative thought "at times has uncanny echoes of earlier reflections on, or apologies for, political and seemingly regenerative, even sacralized violence."

WAAP Book of the Year ... A. Rosati 2006

Applied equine nutrition and training Arno Lindner 2011-09-30 This book contains specialised information on the nutrition and training of the horse. Practical hints can be drawn from studies showing how apes indicate to us plants which have medicinal properties that can then be applied to equine treatment and also have an effect in nutraceuticals. Overviews are given on the potential of total mixed rations for the future of horse feeding and the practical feeding of obese horses and ponies. Nutrition considerations are given to avoid medical conditions. Methods used for performance diagnosis and training guidance of human athletes are applied here to equine management. In addition, training techniques which reduce the risk of back injury in the horse are explored and a review of the riders interaction with the horse is provided. Practical nutritional information acquired through research is applied to all aspects of managing endurance racehorses. Finally, expanded abstracts of original research are provided in very diverse fields of nutrition and training of horses. All those concerned with training, riding and feeding in the equine industry will benefit from the contents.

The Internet of Toys Giovanna Mascheroni 2019-02-21 The Internet of Toys (IoToys) is a developing market within our Internet of Things (IoT) ecosystem. This book examines the rise of internet-connected toys and aims to anticipate the opportunities and risks of IoToys before their widespread diffusion. Contributors to this volume each provide a critical analysis of the design, production, regulation, representation and consumption of internet-connected toys. In order to address the theoretical, methodological and policy questions that arise from the

study of these new playthings, and contextualise the diverse opportunities and challenges that IoToys pose to educators, families and children themselves, the chapters engage with notions of mediatization, datafication, robotification, connected and post-digital play. This timely engagement with a key transformation in children's play will appeal to all readers interested in understanding the social uses and consequences of IoToys, and primarily to researchers and students in children and media, early childhood studies, media and communications, sociology, education, social psychology, law and design.

Caribbean Literature in Transition, 1970-2020: Volume 3 Ronald Cummings 2021-02-28 The period from the 1970s to the present day has produced an extraordinarily rich and diverse body of Caribbean writing that has been widely acclaimed. Caribbean Literature in Transition, 1970-2020 traces the region's contemporary writings across the established genres of prose, poetry, fiction and drama into emerging areas of creative non-fiction, memoir and speculative fiction with a particular attention on challenging the narrow canon of Anglophone male writers. It maps shifts and continuities between late twentieth century and early twenty-first century Caribbean literature in terms of innovations in literary form and style, the changing role and place of the writer, and shifts in our understandings of what constitutes the political terrain of the literary and its sites of struggle. Whilst reaching across language divides and multiple diasporas, it shows how contemporary Caribbean Literature has focused its attentions on social complexity and ongoing marginalizations in its continued preoccupations with identity, belonging and freedoms.
