**Comparative Semitic Linguistics Patrick R. Bennett 1998-01-01 As the title indicates, this unique resource is a manual on comparative linguistics, with the examples taken exclusively from Semitic languages. It is an innovative volume that recalls the earlier tradition of textbooks of comparative philology, which, however, exclusively treated Indo-European languages. It is suited for students with at least a year of a Semitic language. By far the largest component of the book are the nine wordlists that provide the data to be manipulated by the student. Says reviewer Peter Daniels, the wordlists "constitute a unique resource for all of comparative linguistics--a considerable quantity of uniform data from a host of related languages. They would be useful for any class in comparative linguistics, not just for those interested specifically in Semitic." Scattered throughout the text are 25 exercises based on the wordlists that provide a good introduction to the methods of comparativists. Also included are paradigms of the phonological systems of ten Semitic languages as well as Coptic and a form of Berber. A bibliography that guides the student into further reading in Semitic linguistics completes the volume.**

**The TDR Handbook Arthur C. Nelson 2013-02-22 "Transfer of Development Rights" (TDR) programs allow local governments to put economic principles to work in encouraging good land use planning. TDR programs most often permit landowners to forfeit development rights in areas targeted for preservation and then sell those development rights to buyers who want to increase the density of development in areas designated as growth areas by local authorities. Although TDR programs must conform to zoning laws, they provide market incentives that make them more equitable (and often more lucrative) for sellers and frequently benefit buyers by allowing them to receive prior approval for their high-density development plans. Since the 1970s when modern TDR applications were first conceived, more than 200 communities in 33 states across the U.S. have implemented TDR-based programs. The most common uses of TDR to date involve protecting farmland, environmentally sensitive land, historic sites, and "rural character," and urban revitalization. Until now, however, there has never been a clearly written, one-**

At last, *The TDR Handbook* provides a comprehensive guide to every aspect of TDR programs, from the thinking behind them to the nuts and bolts of implementation—including statutory guidance, model ordinances, suggestions for program administration, and comparisons with other types of preservation programs. In addition, six of its twenty chapters are devoted to case studies of all major uses to which TDR programs have been utilized to date, including recent urban revitalization projects that utilize TDR principles.**

**European Merger Remedies** Dorte Hoeg 2014-11-01 *As merger transactions become more complex, so do the remedies involved. This book seeks to identify and examine the most important aspects of merger remedies, which have emerged and evolved in the European Commission's policy and practice over the past 20 years. The in-depth analysis of applicable provisions and guidelines is structured in accordance with a typical 'remedies lifecycle': the negotiation, submission, assessment, adoption, implementation and enforcement of remedies. Furthermore, numerous conditional clearance decisions and judgments as well as studies and legal literature on the subject are described and put into a coherent analytical framework with the aim of providing as much nuance as possible in the evaluation of the Commission's past and present remedies policy and practice. While the Commission indisputably has accomplished numerous successes in its remedies*

To this effect, the final chapter in the book critically assesses whether the current framework, which has remained unchanged since 2008, continues to provide an adequate regulatory response to today's remedies issues and challenges. Where adjustments and improvements are deemed desirable or necessary, possible measures are considered.**

**Financial Capability and Asset Building in Vulnerable Households Margaret Sherraden 2018-04-26 Financial struggles of American families are headline news. In communities across the nation, families feel the pinch of stagnant and sometimes declining incomes. Many have not recovered from the Great Recession, when millions lost their homes and retirement savings. They are bombarded daily with vexing financial decisions: Which bills to pay? Where to cash checks? How to cover an emergency? How to improve a credit report? How to bank online? How to save for the future? Low- and moderate-income families have few places to turn for guidance on financial matters. Not many can afford to pay a financial advisor to help navigate an increasingly complex financial world. They do their best with advice from family and trusted individuals. Social workers, financial counselors, and human services professionals can help. As "first responders," they assist families and help in finding financial support from public and private sources. But these professionals are too often unprepared to address the full range of financial troubles of ordinary working families. Financial Capability and Asset Building in Vulnerable Households prepares social workers, financial counselors, and other human service professionals for financial practice with vulnerable families. Building on more than 20 years of research, the book sets the stage with key concepts, historical antecedents, and current financial challenges of families in America. It provides knowledge and tools to assist families in pressing financial circumstances, and offers a lifespan perspective of financial capability and environmental influences on financial behaviors and actions. Furthermore, the text details practice principles and skills for direct interventions, as well as for designing financial services and policy innovations. It is an essential resource for preparing the next generation of practitioners who can enable families to achieve economic security and development.**

***Not Easy Being Green Susy Gage 2015-02-25 Finding a dead mouse in the lab is not usually such a big deal. But when the lab is a Biosafety Level-3 containment facility designed to keep things in and out, and when the mouse has a brain tumor that shines green under blue light, it's time to start worrying. When the graduate students start glowing, then it's time to panic. Especially when they could be spreading a mutant virus in ways no one really understands. Not Easy Being Green is the second in Susy Gage's "lab-lit" series featuring intrepid physicist Lori Barrow, who by historical accident finds herself in charge of her university's biocontainment facility. When she suspects that a virus that makes cells fluoresce is escaping from the lab, her first thought is to blame the motley crew of bumbling theorists trying to learn biology. But investigation reveals something even more sinister: an unscrupulous researcher with an illegal clinic preying on everyone from the vain to the desperate.***

***Evaluation of Soil and Rock Properties P. J. Sabatini 2004-10-01 This document presents state-of-the-practice information on the evaluation of soil and rock properties for geotechnical design applications. This document addresses the entire range of materials potentially encountered in highway engineering practice, from soft clay to intact rock and variations of materials that fall between these two extremes. Information is presented on parameters measured, evaluation of data quality, and interpretation of properties for conventional soil and rock laboratory testing, as well as in situ devices such as field vane testing, cone penetration testing, dilatometer, pressuremeter, and borehole jack. This document provides the design engineer with information that can be used to develop a rationale for accepting or rejecting data and for resolving inconsistencies between data provided by different laboratories and field tests. This document also includes information on: (1) the use of Geographical Information Systems (GIS) and Personal Data Assistance devices for the collection and interpretation of subsurface information; (2) quantitative measures for evaluating disturbance of laboratory soil samples; and (3) the use of measurements from geophysical testing techniques to obtain information on the modulus of soil. Also included are chapters on evaluating properties of special soil materials (e.g., loess, cemented sands, peats and organic soils, etc.) and the use of statistical information in evaluating anomalous data and obtaining design values for soil and rock properties. An appendix of three detailed soil and rock property selection examples is provided which illustrate the application of the methods described in the document.***

***Meeting Globalization's Challenges Luís Catão 2019-11-05 "In the US, in Europe, and throughout the world, globalization, in tandem with technological progress, has left a massive number of people behind, feeling dispossessed, disenfranchised, and angry. Leading the charge of "hyperglobalization" during the second half of the last century, and enforcing the Western framework of austerity in the developing world has been the International Monetary Fund. Along with the World Bank and WTO, many consider the IMF one of the most consequential institutions to have pushed the world economy blindly towards excessive globalization, while not adequately considering its powerful negative consequences. In October 2017, however, the IMF convened with some of the world's most celebrated economists and experts on trade and globalization to have an honest discussion on the most pressing concerns the world faces today as a result of globalization, and how to address the extensive challenges it has created. Edited by chief economist Maurice Obstfeld and senior economist Luis Catao of the IMF, the book brings together a team of respected senior economists with the most promising younger scholars to address five major themes: how globalization affects economic growth and social welfare; potential political implications of an honest discussion of globalization, and that "free trade may not be politically viable"; free trade's role in global inequality; how workers adjust or not when they're dislocated by globalization; and how trade policy influences the way countries develop their economies and societies.
