The Rover K-Series Engine Iain Ayre 2018-03-26 Getting a Rover K-Series engine properly up and running can be a difficult task, but ultimately the result is always worthwhile. Illustrated with over 300 photographs, Rover K-Series Engine - Maintenance, Repair and Modification is a practical guide to keeping these unique engines in fine working order. The most well-known issue with the K-Series is the head gasket, and this book demonstrates how to identify common faults, before giving practical advice on how best to solve them. Step-by-step guidance on all aspects of long-term engine maintenance is provided, in addition to the improvements required to prevent further problems. A K-Series engine is then stripped down to examine its clever and interesting structure, and is rebuilt with improvements. Authors of over twenty automotive books and countless articles in assorted motoring magazines, Iain Ayre and Rob Hawkins have combined their knowledge to bring you this book on the Rover K-Series engine, which is fully illustrated with 356 colour photographs.

Vintage and Classic Tractor Restoration Richard Lofting 2017-02-28 Vintage and Classic Tractor Restoration is a complete guide to the subject, looking at how to initially purchase a tractor, through private means or at auction, and then how to restore it back to its former glory, as it would have looked when it left the factory. It is even possible to preserve a classic tractor in its working condition, which has a unique appeal to some tractor collectors and in some ways is harder than a full restoration to undertake. Practical techniques have been amply illustrated throughout the book, ranging from the simple use of a lathe or milling machine to the making from scratch of various tools useful in restoration work. Rather than just replacing items such as carburettor, starter motor or dynamo, practical advice is given on how to test and rebuild these components back to full operation. Fifty-two practical picture spreads show techniques suitable for restorers of all levels of skill. Contents: Setting up the workshop and making specialist tools; Finding a tractor to restore; Engine and fuel; Electrical systems; Transmission and brakes; Wheels, tyres and steering; Hydraulics and the three-point linkage; Metalwork; Painting and finishing. Aimed at serious tractor enthusiasts and agricultural machinery engineers and fully illustrated with 1100 colour photographs.

Building a Special with Ant Anstead Master Mechanic Ant Anstead 2021-07-20 Ant Anstead's Building a Special brings the Haynes story full circle, coming 61 years after the original Building a 750 Special was written by John Haynes, Haynes Publishing's founder, when he was still a schoolboy. This book is a TV tie-in, following the 12-part TV series Ant Anstead Master Mechanic, aired on Motor Trend, part of the Discover Network in the US and UK, following Ant Anstead's build of his own-design 'special' car, taking inspiration from the Alfa 158 - the first

World Championship-winning F1 car, which raced from the 1930s until the 1950s. The 12-part TV series followed Ant's build of the car, from the first design ideas, through the construction, culminating in the debut of the car during the 2019 US Grand Prix weekend in Austin, Texas. The book follows Ant's personal build of the car, from the selection of the donor MG TD for the chassis, and Alfa Romeo Spider for the engine and gearbox, through modifying the chassis, building the suspension, steering, brakes, bodywork and interior, and putting all the components together to produce a finished one-off 'special.' Content includes: Introduction The history of specials Planning Donor car Chassis, suspension, steering, rear axle Engine, fuel system, cooling system, ancillaries, exhaust Gearbox Bodywork Braking system Cockpit Wiring Preparation and painting Testing Setting up and Making road legal.

Parentology Dalton Conley 2014-03-18 An award-winning scientist offers his unorthodox approach to childrearing: “Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions” (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.

Automotive Machining Mike Mavrigian 2017-04-17 Machining is an essential part of high-performance engine building and stock rebuilding, as well as certain servicing procedures. Although you may not own the expensive tooling and machining to perform all or any of the machining required for a quality build, you need to understand the principles, procedures, and goals for machining, so you can guide the machining process when outsourced. Classic and older engines typically require extensive machining and almost every major component of engine, including block, heads, intake, crankshaft, and pistons, require some sort of machining and fitment. A detailed, authoritative, and thorough automotive engine-machining guide for the hardcore enthusiast has not been available until now. Mike Mavrigian, editor of *Engine Building Professional*, walks you through each important machining procedure. A stock 300-hp engine build has far different requirements than a 1,000-hp drag race engine, and Mavrigian reveals the different machining procedures and plans according to application and engine design. The author also shows you how to inspect, measure, and evaluate components so you can provide astute guidance and make the best machine work choices. Machining procedures included are cylinder boring, align boring/honing, decking, valveseat cutting, cam tunnel boring, and a multitude of

other services. In addition, multi-angle valve jobs, setting the valveseats, altering rocker arm ratio, re-conditioning connecting rods, and machining and matching valvetrain components are also covered. Whether you're an enthusiast engine builder or prospective machining student who wants to pursue a career as an automotive machinist, this book will provide insight and in-depth instruction for performing the most common and important machining procedures.
